

# Non-invasive Drug Testing at the Tips of your Fingers

The Intelligent Fingerprinting Drug Screening System is increasingly recognised as the world's first fingerprint-based drug testing system using fingerprint sweat analysis to detect cannabis, cocaine, opiates, and methamphetamine. The system is easy to use, portable, and offers a quick, non-invasive alternative to traditional drug testing methods such as urine and saliva. With a 16-hour detection window, the system is ideal for determining employee fitness for duty. The fingerprint sweat screening process is non-biohazardous, eliminating the need for specialist handling, collection areas or clinical waste disposal. The system's portability enables tests to be conducted almost anywhere and at any time, allowing organisations to conduct drug testing more efficiently than traditional methods.

## Reduce Risk

Aim to identify current impairment rather than past use with a detection window of only 16 hours.

## Respect Dignity & Privacy

Preserve employee dignity with quick, non-invasive, and hygienic analysis of fingertip sweat.

## Ensure Testing Integrity

Prevent foul play and maintain sample integrity through administrator-supervised testing and self-locking sample seals.

## Expand Testing Capabilities

Conduct screening at any time and location using a compact and portable system.

## Save Costs

Bring drug testing in-house and eliminate the need for specialised staff or facilities.

## Increase Efficiency

Rapidly collect samples and employ batch testing to analyse drug screening results in minutes.

## Product Footprint

Developed and manufactured in the UK for over 10 years, the system is currently being distributed across 18 geographical regions, including the UK, Australia, South America, and parts of Europe. The National Association of Testing Authorities (NATA) has accredited Intelligent Bio Solutions' laboratory partner, Racing Analytical Services Limited (RASL), to perform its fingerprint confirmatory drug testing procedure. The Intelligent Fingerprinting Drug Screening System is CE-marked and is an exempt medical device in Europe.
