Non-invasive drug screening at the tips of your fingers

ibs.inc

Intelligent Fingerprinting Drug Screening System

The Intelligent Fingerprinting Drug Screening System is the first portable fingerprint-based drug screening system that uses fingerprint sweat to detect cannabis, cocaine, opiates, and methamphetamine. The system is a highly effective alternative to traditional methods, offering significant time and cost savings. Its 16-hour detection window makes it ideal for assessing employee fitness for duty in the transport industry. The system's portability allows for screening almost anywhere and anytime, enhancing operational efficiency and promoting workplace productivity. This particularly benefits Australia's transport sector, where safety and efficiency are critical.

Respect Privacy & Dignity

Preserve employee dignity with quick, non-invasive, and hygienic analysis of fingertip sweat.

Expand Testing Capabilities

Conduct screening at any time and location using a compact and portable system.

Reduce Risk

Aim to identify current impairment rather than past use with a detection window of only 16 hours.

Save Costs

Bring drug testing in-house and eliminate the need for specialised staff or facilities.

Ensure Testing Integrity

Prevent foul play and maintain sample integrity through administrator-supervised testing and self-locking sample seals.

Increase Efficiency

Rapidly collect samples and employ batch testing to analyse drug screening results in minutes.
